Cobordism theory is the study of manifolds modulo the cobordism relation: two manifolds are considered the same if their disjoint union is the boundary of another manifold. This may seem like a strange thing to study, but there ... Note that any manifold  $M$  is the boundary of  $M \times [0, 1]$ . This is why we

Note that the manifolds in a cobordism are not assumed connected. Consider cobordism classes from  $M$  to itself,  $M$  fixed. These form a monoid  $HM$ , i.e. a set with an associative composition with an identity. The invertible cobordisms in  $HM$  form a group  $G_M$ . We can construct some elements of  $G_M$  by taking  $M = M_1$  below.
